

PROJECT

DAPSI

Data portability and services incubator

DAPSI goal is to make significantly easier for citizens to have any data which is stored with one service provider transmitted directly to another provider, addressing the challenge of personal data portability on the internet as foreseen under the GDPR.

This project has received funding from the European Union's Horizon2020 Research and Innovation Programme under Grant Agreement N° 871498

01

Challenge

The new data protection regulation has been developed to give individuals better control over their personal data. Switching from one service provider to another entails significant cost and difficulty for users. Data processing service providers must develop interoperable formats for data portability as soon as possible. There are therefore major technological challenges in this area that must be addressed in order to provide a solution and translate the regulation into reality.

02

Solution

DAPSI will promote advanced research in the field of data portability by supporting researchers, SMEs and start-ups or innovators across Europe with a 9-month incubation programme. During this period, the selected teams will receive financial support (up to €150k per team) and a package of services such as coaching and mentoring in the necessary technology and business areas, which will pave the way for them to successfully reach the market with their use cases.

03

Impacts

Through a total of 3 calls, the 50 brightest researchers and innovators in Europe will be selected. A total of €5.6m will be spent on bringing their solutions to market. Specifically, 35 of them will reach the end of the incubation with an MVP (Minimum Viable product) with great market potential in the short to medium term.
